

Strata Solar

Background and Experience

Strata Solar is one of the leading utility scale solar developers in the United States. We employ a professional staff of over 400 people in our Durham, NC headquarters, less than 4 hours from the Maroon Solar site. Strata is an end-to-end, fully integrated solar company including development, engineering, construction, finance and operations functions.

Strata has developed, constructed and operates over 200 projects across the US that total over 2,000 MW, the solar equivalent of two nuclear power plants. We recently passed 12 years in operation, and three years ago we opened a battery storage division. Our broad capability and scale allowed us to quickly develop one of the largest battery storage projects in the world, in Oxnard, CA, where the battery project replaced a proposed fossil fuel plant.

Strata operates solar energy plants for Dominion Energy, Duke Energy, Georgia Power, the TVA and other major utilities across the United States. Virginia is the primary focus of our solar development efforts and we are one of the leading contractors for Dominion Energy's renewable energy plan.

Strata has completed construction of 267 MW of projects in Virginia, including a 100 MW portfolio of projects for Dominion and is currently building an additional 362 MW of solar for Dominion. Strata has developed or is in the process of developing over 900 MW in Virginia.

Constructing and Operating

Project	Location	Size (Mwac)	COD
Gloucester	Gloucester, VA	20.0	2019
Sappony	Sussex, VA	20.0	2018
Buckingham	Buckingham, VA	22.0	2018
Scott II	Powhatan, VA	22.0	2018
Correctional	New Kent, VA	22.5	2018
Remington	Fauquier, VA	20.0	2017
Colonial Trail	Surry, VA	142.5	2019
